

## **UST and SAF Bulletin**

### **Arizona Department of Environmental Quality**

**Subject: PERIODIC REPORTING OF CORRECTIVE ACTION INFORMATION**  
**Effective: November 28, 2007**

**Item: 07- 03**

---

#### **TYPE**

**Corrective Action Guidance**

#### **BACKGROUND**

There appears to be confusion regarding the appropriate method of periodic reporting of corrective action information for Leaking Underground Storage Tank (LUST) sites.

#### **CONTENT**

“Following approval of the site characterization report (SCR) and in accordance with Arizona Administrative Code (A.A.C.) R18-12-263(G), periodic site status reports are required to be submitted to ADEQ. The frequency of reporting and the frequency of groundwater sampling (if applicable) will be as requested by ADEQ or as approved in a corrective action plan (CAP). These reports should be titled “Periodic Site Status Report”, contain the information required by rule and requested by ADEQ and; in accordance with A.A.C. R18-12-264(A), must be submitted with a Document Submittal Form. Periodic site status reports should be submitted until LUST case closure is approved by ADEQ. Any site specific information collected before a SCR is approved should be included within the SCR. Other reports (e.g. groundwater monitoring reports, corrective action reports, etc.) are not required by the corrective action rules and should not be submitted to ADEQ. Also, in accordance with Arizona Revised Statutes (A.R.S.) § 49-1054(C), the costs associated with these non-required reports are not SAF eligible.”
